SUMMARY

During Web Dev I we develop a real estate website as a final project. Since the website was complete and has a front end and back end well defined and well developed, Team 1 chooses to use this website as a starter to attend all Web Dev II requirements for the final project.

In this document we will introduce our ideas and first definition as requested by Gregory Prokopski.

INTRODUCTION

TITLE OF THE PROJECT

Just Sell Real Estate Website

PROJECT DESCRIPTION

Just Sell Real Estate Website is a website for a Real Estate company where all properties can be announced by the company. In this website the company can post real pictures, information about the properties and take questions from user.

The Just Sell Real Estate Website is designed to provide a seamless and user-friendly experience for both registered users and real estate professionals.

Individuals who register on our site gain access to a plethora of features, including the ability to browse properties, conduct searches based on various criteria, and even make secure property purchases online.

For realtors, the platform offers advanced functionalities. Realtors can leverage the website to showcase their property listings by posting real pictures and detailed information. The comprehensive CRUD (Create, Read, Update, Delete) operations enable realtors to manage their property listings.

Administrators play a crucial role in overseeing and managing the entire system. They can perform CRUD operations related to user management. This includes adding new users, modifying existing user details, and ensuring a secure and organized user database.

The website incorporates modern technologies, such as React for an interactive user interface, NodeJS/Express for robust server-side functionality, and MySQL/SequelizeJS for efficient database management. Additional libraries, including express, Cors, Nodemon, Axios, Bootstrap, Formik, and yup, enhance the development process and contribute to a feature-rich application.

TECHNOLOGIES USED

Just Sell Real Estate Website uses the following technologies:

- React
- NodeJS/Express,
- MySQL,
- Sequelize JS

SPECIAL FEATURES

Just Sell Real Estate Website uses the following special features:

- **User Authentication and Authorization**: Implement a secure user authentication system, allowing users to register, log in, and access personalized features.
- **Responsive Design:** Prioritize creating a responsive and mobile-friendly design.
- **Property Listing and Details:** Develop an organized interface for displaying property listings. Each property should have a details page showing relevant information, such as images, descriptions, and specifications.
- **Search and Filter Functionality:** Implement a search and filter functionality to enable users to find specific properties based on criteria such as location, price range, or property type.
- **External API Integration:** Consider integrating external APIs for additional data, such as mapping services for property locations.
- **S3 Integration:** considering Amazon S3 for efficient storage and retrieval of property images.
- **Online Payment:** implement secure online payments for property transactions using Stripe.
- **Deployment**: Explore deployment options and consider deploying your application to a platform like GitHub + Heroku.

ADDITIONAL LIBRARIES

Just Sell Real Estate Website uses the following additional libraries:

- Express
- Cors
- Nodemon
- Axios
- Bootstrap
- Formik
- Yup

CHALLENGING ITEMS THAT WERE NOT DONE IN CLASS

Here are listed the challenging items：

- Implementing a robust search functionality for enhanced user experience.
- Integrating Amazon S3 for efficient handling of property images.
- Setting up Heroku CI/CD for automated deployment.
- Enabling online payment capabilities for seamless transactions.

LIST THE URLS

Here are listed the URLs (include API calls on a separate list) you'll be handling.

- /index (homepage)
- /login
- /register
- /agent/property (only for realtors)
- /filter (list of properties with a filter)
- /{id} (view individual post on a certain property)
- /payment
- /admin/*** (e.g. users)

MS SQL DATABASE DESIGN
